

**Name: Hailey Usher**

**Questions:**

1. Assume you are in the **index.html** file, and want to edit the links in the navbar. Specifically, what would the path be to link to the **about.html** page?
  - a. Answer: **/about.html**
2. Assume you are in the **index.html** file, and want to apply CSS to the page. What would the path be to link to the **index.css** file?
  - a. Answer: **../css/index.css**
3. What element would you put that path in? (Give the full element). Where would it go in the **index.html** file?
  - a. Element: **<link>**
  - b. Location in HTML file: **<head>**
4. Find where the **codepoetry2021.html** file is located in the repo. What sub-directory (folder) is it in?
  - a. Answer: **projects sub-directory**
5. Imagine you wanted to add a link back to the **index.html** file in the **codepoetry2021.html** file. What would the path to that file be?
  - a. Answer: **../index.html or /index.html**
6. What about applying some CSS – namely that same **index.css** from before. What would the path be to correctly link to that file, from the **codepoetry2021.html** file?
  - a. Answer: **/css/index.css or ../css/index.css**
7. There's a file called **headshot** somewhere in the repo. Where is it?
  - a. Answer: **assets sub-directory**
8. What would the path be to add that **headshot** file to the **index.html** file? What would the full element be? Where would it go in the **index.html** file?
  - a. Path: **/assets/headshots/index.html**
  - b. Full Element: **<script href="/assets/headshots/-file">**
  - c. Location in HTML file: **<html>**
9. The **contact.html** page is a good place to add external links. What would the path be to add a link to the front page of the New York Times? What type of path is this?
  - a. Path: **<a href="https://www.nytimes.com/">NYT</a>**
  - b. What type of path: **absolute path**
10. What is going on in the **\_data** sub-directory? Namely, what type of files are there (what is a .yml file)? Where on Anthony's site do you think the contents of those files display (take a guess, based on the names of the files)? *You might need to look at Anthony's actual website.*
  - a. What is a .yml file: **file that pulls the most recently updated data**
  - b. Where is the data in those files displayed: **the data is displayed on Anthony's main website page**

11. What about the **\_includes** sub-directory? What do you think the files in that sub-directory accomplish, based on their titles? *You might need to look at Anthony's actual website.*
  - a. Where do the files in the \_includes sub-directory appear: **the left-side panel of Anthony's website that persists throughout all pages**
